SERVICES

E-PUBLISHING

Excellent QA processes, timely deliveries and aggressive turnaround times are the trademarks that underline our E-Publishing Solutions. With over 25 man years of experience, our team has executed large scale traditional **desktop publishing** to advanced **XML publishing** projects in over 18 languages.

MULTILINGUAL DTP

We provide offshore Desktop publishing services for Windows and Mac, to process a wide range of publishing formats, such as FrameMaker, QuarkXPress, PageMaker, Adobe InDesign, Illustrator, Microsoft Word and Powerpoint.

CONTENT CONVERSION

We offer a complete portfolio of content services for digitization of legacy data and conversion to structured content formats. Our methodologies implement various custom developed tools to address specific client needs such as OCR, technical illustration conversion and graphics optimization.

XML PUBLISHING

We develop global content strategies and publishing frameworks to help you manage your transition from traditional DTP processes to advanced XML based publishing. Our solutions implement industry proven open standards such as DITA , DOCBOOK and XBRL.

E-LEARNING

We specialize in developing global solutions for E-Learning courseware. Our approach of externalizing all localizable elements in the form of XML assets has helped our clients in significantly reducing the cost of global training content deployment.

LOCALIZATION

TECHNICAL PUBLICATIONS

We specialize in the analysis and preparation of diverse file formats for translation into different languages for print, online, interactive, and packaging content. Our localization engineers provide technical support to translators and coordinate all engineering and publishing activities to create final delivery outputs.

ART AND MULTIMEDIA

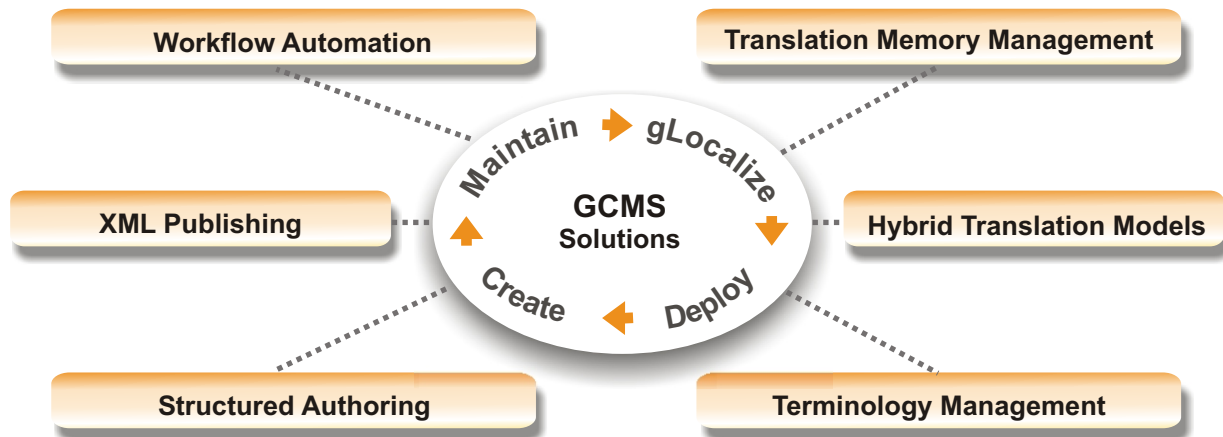

A one-stop solution for localizing all your digital assets used in content publishing such as technical illustrations, screen captures, interactive flash animations and E-Learning simulations.

SOFTWARE ENGINEERING & QA

We focus on developing localization automation kits using technologies such as Passolo, Perl and Java to integrate with workflow systems to provide a seamless localization experience for our customers. Our engineering and QA services cover all aspects related to language engineering and localization of large scale desktop and web applications.

SOLUTIONS

Our **content lifecycle** management solutions help organizations streamline their models for creating, managing, and publishing **global** content.

■ GLOBAL CONTENT MANAGEMENT IDIOM WORLDSERVER™ SYSTEM INTEGRATORS & CONSULTANTS

We deliver Global Content Management solutions based on the **Idiom® WorldServer™** platform to help manage the global content lifecycle while working with a wide range of content models from structured XML to unstructured files such as MS Office documents.

The GCMS team at Quagnito comprises of solutions architects, localization engineers and Java/XSL developers. Our experience of working with WorldServer implementations at some of the largest software product companies provides the basis for defining strategies and processes for the most optimized implementations of the Idiom WorldServer™ framework.

■ ENGINEERING PRODUCT CATALOGS

Our catalog solutions assist you in every phase of engineering catalog production from design, integration, deployment and subsequent revision management. With a seamless integration of data base content, textual content and digital assets, our solutions provide a one-click multilingual publishing framework.

■ SIMULEARN – INTERACTIVE PRODUCT SIMULATIONS

SimuLearn is a framework for creation and global deployment of complex interactive simulations (training content) for software applications. Built using strong instructional design principles and a scalable architecture which enables reuse of simulation objects, each training module can be deployed in multiple languages, in various modes such as instructional, interactive and adaptive.

Quagnito is India's fastest growing localization service provider offering high quality cost-effective solutions in the space of global content management, E-Publishing and Software Localization.

Our focus on technology, linguistic tools and process automation, coupled with flexible and innovative delivery models makes us your preferred partner for content localization solutions.
